

Ecommerce-Shoe mart

LEO SHOES

1.INTRODUCTION

1.1 Overview:

Ecommerce refers to all online activity that involves the buying and selling of products and services. In other words, ecommerce is a process for conducting transactions online.

As by using the ecommerce we are preparing the shoe mart and make it as a project and make the LEO Shoes as the platform

LEO shoes is the platform that is used for the getting the products of different shoes. The are different branded products of shoes. That make the available for the all. In these, there are products that can suitable to all.

In this platform the shoes are favor to all the customers. These are different usages and different categories.

As these platforms is for the all type of people and make available for them these make easy purchase of the products. It is platform that created by using the different languages and make the website by using the Front-End development.

The basic languages used in this is html, css, java script. By all these the platform LEO shoe mart is made. As these platforms is used for the shopping show room.

1.2 PURPOSE:

This platform is used in different ways. These shoes are of different styles, colors, and models. They may use in different places and different situations. These shoes are useful to every person of the society. They can be of all levels. These can be from low price to high price.

These are also of the different shoe products and used for the different categories.

- LEO products are useful of the shoe shopping
- They can be easily brought by all the people.
- LEO platform is not only used by the customers but also for the staff of the platform
- It provides the employment for the different people.
- As the are available for the all circles.

The leo products make the use are of many times and they are of the different categories may be of the for running, skating, and are of different types and styles. These are of the different models.

Platform is used in all shoe types. As there are all different types at one place. And make available of the products to all different kinds of people.

2.LITRATURE SURVEY

2.1 EXISTING PROBLEM:

The existing problem of the LEO platform is that it had been created using the Front-end development. As it the only thing used in this website such that it can be difficult for the usage of the backend process.

Without the backend process there are some things that can be workable.

In the LEO platform there are few problems that are facing by the customer. These problems as be solved many of them in favor of the customer. Some of the problems are regarding the response for that leo as arranged the new team so that they can be easily respond to the query of the customer. As this made the platform to increase the customer rate.

By the queries the customers had solved the many of the problems.

Present the existing problem is about the products. As in this platform is provided all types of the products and categories so that there is a difference in the products as there may be of the unbranded products and branded products too.

So, there are different ways to solve this problem. That the people can be easily know the modification.

2.2 PROPOSED SOLUTION:

There may be many solutions for this problem. As there are different ways to solve this as some are of the other suggestions.

My suggestion is to modify the products according to the categories. As they can be change these by the reviews of the customers. In these products they can be some of the poor products that are of low quality.

So, for this the leo platform should be alert as such products may cause the bad reputation for this website. So that such products should be verified and then get the info of them. By making the manufactures that to aware of this. So that they can be resolve the products by improving the quality of the product. Or else the agreement can be dissolved.

The other things that can be done are to make the modifications under the brand products and unbranded products. For this leo should deal carefully as to summarize the products. There they can search according to the brands and can be able to get the products easily.

As the products are to meet the customers' expectations so for that the organization or platform make the products or other things all are available for the customers. The response of the customers' and their queries can be solved as immediately so that it can easily know about the product.

3. THEORITICAL ANALYSIS

3.1 BLOCK DIAGRAM:

LEO SHOE MANAGING BLOCK DIAGRAM

3.2 HARDWARE / SOFTWARE DESIGNING:

The project is designed by using some of the hardware and software applications. As these may useful for the functioning of the work.

The applications are of the front-end development and these are of the different applications and languages.

The leo platform is used the front-end development. In this we use the languages as the base of HTML, CSS, and JavaScript.

This is the project that are for coding and designed the work of the project. The coding makes the platform to create in an easy way so that they can be used by us. The platform is design in the bases of the functions.

The designing of the code used then there can be set the size of the layouts and colors and buttons and everything is given in these.

The buttons, logos and the all texts that to be showed is given in html code. As by using the Java script we use the scripting class. The CSS code is used for the color size and other things to be finalized is used in this.

The platform can be used for the different ways.

5. ADVANTAGES AND DISADVANTAGES

There are different advantages and disadvantages on regarding this process and for designing the websites and make the good impact such that they will be produce the platform that are of advantages and disadvantages.

Advantages:

- The advantages of this solution are for the making of the platform.
- These are used by the front-end development that uses the work to complete it easily.
- They are used for the different ways such that easily manageable.
- By the front-end application, they are of the usage of the different buttons and icons can be inserted.
- The Leo shoes are providing the best products. There we can get by using the categories.

Disadvantages:

- In Leo products there can be different sections and products that may cause for the unbranded items.
- The unbranded items cause the effect of the leo platform.
- It can be of difficult to use.

6. APPLICATIONS

There are different applications that are used for the project.

As this project used on the basics of the Front-end development. This application is used for the purpose of the designing of the websites. The website is of different features, and make the usage of the different languages as like HTML, CSS, JavaScript.

The usage of these languages is to the important and base of the project and for the designing the websites for any of the application.

The Leo shoes are used in different ways and these can be applicable for many purposes then these are used of the category wise.

The Leo shoes can be used of the running, walking, and for the different styles. They are available for the different wears for men's wear. In this there can be of the party wear, casual wear, sportswear, running shoes, and different models in the formals and many branded shoes are available for the customers that are can be easily brought by the purse of the products.

So, the products can be easily available for everyone and in the different styles in the online platform and make the purse level from low to high.

7.CONCLUSION

The Leo product is one of the platforms that are used for the purchase of the shoes in this. The Leo is the best online shopping website that is used for the shopping of the shoes of men's wear and make them available in the different styles.

So, this platform is used in the getting of the products.

8. FUTURE SCOPE

The future scope of the Leo platform is for the improvement of the products quality and its response will be better. This web application is used to only for the men so they may be available for the women too.

They improve these as the scope of the future
